Who is the ID Agent Security Team?

Meet the ID Agent Security Team! Three heroes who work together to help people and businesses protect their information from being stolen by bad guys.

Billy, Penny, and Danny work very hard to guard important **Digital Data like passwords, files, banking documents, personal information, business secrets or anything else that is stored on a computer or in the cloud and keep it protected and safe!**

How do they Help?

The Security Team is a special part of ID Agent! We help companies figure out where they have **Risk**, like if their employees don't know all the security rules or they need to use better passwords. When our team finds a **Risk**, we use our tools to help fix it and **Protect** the company from being hacked or robbed by bad guys and losing their valuable digital data.

**Billy the Bull loves to fish
But bad guys go 'phishing' too
If you give your information away
Then the fish they might catch is you!**

**Color Billy on
the next
page!**

**Penny the Pachyderm remembers things
Like passwords and logins and numbers in strings
So don't write your passwords and logins down
Because bad guys know that's where they can be found!**

**Color Penny on
the next page!**

**Danny Dalmatian never takes a vacation
He searches the Dark Web with determination
He's on the hunt for your information
And when he finds it he barks in celebration!**

All About ID Agent

ID Agent is a company that makes cybersecurity software and other tools, so that IT teams can keep customers and employees safe from the people who try to hack into networks and steal data or other valuable property. The team at ID Agent works very hard to build these tools to help companies of all sizes, all over the world.

This Activity Book teaches about **Digital Risk Protection**, and ID Agent has three very important products that make up their DRP Solution.

DARKWEB

Dark Web ID is a tool that monitors the areas of the web where bad actors buy and sell things illegally, like stolen user names and passwords. IT Teams all over the world trust Dark Web ID to make sure they know if their credentials are on the Dark Web.

BULLPHISH

BullPhish ID allows IT Teams to teach employees good cybersecurity practices, and to recognize when someone is trying to trick them. It sends short teaching videos with a test at the end, and practice phishing emails, so people learn to be a strong defense for their company!

Passly

Passly is a Secure Identity & Access Management platform. That means it helps IT Teams make sure the right people can access the right business tools from the right devices and locations. It makes life easier so you don't have to remember a bunch of passwords for different logins!
